## How to Add a Customized Background Image to Your zoomshare Web Pages

Compiled By [www.sare.zoomshare.com](http://www.sare.zoomshare.com)

### Step 1.:

Upload the image that you're going to use as your background image to File Storage

#### Notes On the Type of Image to be Used:

*You can use an animated or static gif, or a jpg, but it's best to try to keep the file size as low as possible if you want to limit the amount of time it takes your page to load.*

Click 'File Storage' tab.

Click 'Upload a New File'.

Browse for and select the file in your computer.

Click 'Upload File'.

\*Note the unique url of the file you just uploaded to File Storage, which will be presented to you like this:

Return to main File Storage screen by clicking, 'Return to File Storage'.

## Step 2.:

### Add & modify a snippet of code in the HTML editor

Click 'Web Page Editor'

Click 'HTML' button inside editor toolset, which looks like this:

The addition and modification of code inside the HTML editor only changes the background image of web pages, and not of your Blog, Photos, Links, Calendar, or Profile page.

Within HTML editor, position cursor in front of all of the existing code and then press the 'Enter' key a few times to 'make room' for the code that you're going to be adding which accompanies the help video in a Notepad text file.

Open Notepad text file containing code located here - <http://www.allabout.zoomshare.com/3.html> , or copy the code below.

Copy code within Notepad file.

Paste code right into the top of the editor.

Change url referenced in code to reflect the url (location of the file) that you uploaded to file storage, such as the following:

**COPY/MODIFY** this code:

```
<STYLE type=text/css>body {  
    background-image:  
url ("http://www.changethis.zoomshare.com/toreflect/imageurl");  
}  
</STYLE>
```

In the case of my website, the code was changed to the following:

```
<STYLE type=text/css>body {  
    background-image:  
url ("http://www.testsare.zoomshare.com/files/bg.gif");  
}  
</STYLE>
```

The code directly above was pasted into the HTML editor.

NOTE: Changing the code is a very important step to get right, and you may need to watch this video again to note the steps.

After the url section of the code has been changed, click 'Update' in your HTML editor window.

Save changes.

Press view site link to view a live version of the zoomshare website opened up in a new browser. Press the refresh button in your browser to ensure the most recently updated version of the website is being viewed.

We hope this has been helpful for you. If you need to reach customer care, you can visit our help/blog website [www.allabout.zoomshare.com](http://www.allabout.zoomshare.com) , e-mail us at [customerservice@zoomshare.com](mailto:customerservice@zoomshare.com) , and I can be reached at [www.sare.zoomshare.com](http://www.sare.zoomshare.com) . Thank you for your time!
